English Portuguese Tetun

**Welcome**  
Agriculture is the main activity in Timor-Leste, providing subsistence to an estimated 80% of the population. It also generates an average of 90% of the exports, mainly due to coffee. Most farmers practice subsistence farming, planting and harvesting what they need for a simple life-style, collecting wild foods and traditional medicines, and the animals are very much left free to grow and reproduce. There are almost no large scale farms except for missions.

Timor has given unique contributions to world's agriculture. It is recognized as the home of "Timor Hybrid", a coffee variety which combines resistance to the rust disease Hemileia vastatrix, and produces a coffee with quality almost as good as the Arabica. Some authors (For example Rui Cinnati) also recognize Timor as the origin of Sandal wood.

## Example documents

Grasses of Portuguese Timor and Information about their fodder value. 1962. F. Antonio Soares

Parasitic investigation in Timor: A contribution to the study of parasitological fauna of it's domestic animals 1975 J.A. Cruz E Silva

The history of sandal wood. 1960 Rui Cinati

The soil map of Portuguese Timor – The eastern end. 1963. J. Sacadura Cabral, E.C. Sousa, M.M.Gonçalves

Rapid rural land use assessment and model for land use classification and mapping. 1991 ALGIS

Studies on coffee from Timor 1976. M. Mayer Gonsalves, Marcelino M. Rodrigues and Ernst Daehnherdt

In defense of rice breeding and research in Timor. In reply to a unexplainable attitude of the territorial administration. 1976 Maye Goncalves
